

Air heater Type 7500

High-power air heater up to 10 kW for industrial continuous operation

Highlights

- **High-power air heater up to 10 kW for continuous use**
- **Available in a variety of power versions**
- **Integration into professional production processes**
- **Electronically controlled and continuously adjustable**

Description

The Type 7500 high-power air heater is the right air heater for production processes. This air heater is powerful and can be used with up to 10 kW in continuous operation.

Thanks to its robust and compact design, the strong Type 7500 air heater is suitable for installation in machines, fixtures, heating channels and on conveyor belts.

The heating power of 5000 W, 7500 W or 10000 W is electronically controlled and continuously adjustable. On request, the air heater can also be supplied without electronics. The maximum temperature is 700 °C.

Like all our air heaters, the Type 7500 is also operated with an external air supply and is therefore almost maintenance-free and suitable for continuous use. With wide-slot nozzles up to 200 mm wide, the air outlet can be spread, centred and changed for individual applications.

Technical data

Voltage	230 V – 480 V
Power	5000 W – 10 kW (5000 / 7500 / 10000 W)
Temperature	up to 700 °C
Air volume	500 – 1500 l/min (depending on nozzle)
Air supply	extern (Gebläse, Pagenkanalverdichter oder Kompressor)
Weight	2,4 kg
Conformity marks	CE; EAC
Protection class	II

Air heater Type 7500

Technical changes and errors excepted.
